/Paul H Kang/ Primary Examiner, Art Unit 2444

Continuation of 11, does NOT place the application in condition for allowance because:

- 1) Applicant's arguments regarding the 35 USC 101 rejection of claims 22-30 is unpersuasive because Applicant clearly disclosed in paragraph (1060) that "The storage medium may comprise any information bearing medium known in the art including a transmission medium. Furthermore, program logic that includes code may be implemented in hardware, software, firmware or any combination thereof." Applicant's disclosure clearly shows that Applicant intends the computer readable storage medium to include "transmission medium", which is unatentable under 35 USC 101.
- 2) Per Applicant's request, Examiner shows the elements of the cited references that correspond to the following limitations in the claim. Examiner would like to point out that as an Applicant is allowed to be his own lexicographer, Applicant's naming of the claim elements may be different from that in the cited references while the elements are structually and/or functionally equivalent.
- 1) iSCSI driver (Hayes, Fig. 10 and [0056], "Application protocol offload processing function 167" combined with Pinkerton, Fig. 3 and column 10, lines 6-48, "Transport Layer Interface (TLI) Switch")
- 2) iSCSI protocol layer (Hayes disclosed iSCSI in [0027], which is an application protocol over TCP/IP, therefore it is inherent that Hayes must implement a iSCSI protocol driver over TCP/IP in order for iSCSI to work);
- iSCSI transport abstraction layer (Pinkerton, Fig. 3 and column 10, lines 6-48, "Transport Layer Interface (TLI) Switch", which is an
  interface to the transport layer that deals with all the transport specific matter such that the upper layer protocol need not be aware of any
  OS specifics.
- In another example, Yeh disclosed in page 4, section "Performance with TCP Offload" disclosed a socket layer above the transport layer that abstracted the communication between the application layer and the transport layer, where the socket layer serves a similar purpose as the ISCSI transport abstraction layer.
